

Full Stack Developer Job Description

Responsibilities:

- Develop front-end architecture and ensure responsiveness of web applications.
- Create servers and databases for functionality.
- Design APIs and integrate them into projects.
- Debug and troubleshoot both frontend and backend code.
- Collaborate with teams, including graphic designers and project managers.
- Stay updated with new technologies and incorporate them into projects.

Skills Required:

- Proficiency in front-end technologies (HTML, CSS, JavaScript, and frameworks like React or Angular).
- Experience in back-end development with languages such as Python, Ruby, Java, or Node.js.
- Knowledge of databases (SQL, NoSQL) and cloud services (AWS, Azure, or GCP).
- Understanding of DevOps practices and CI/CD pipelines.
- Strong communication and problem-solving abilities.
